

## **AEERIS LIMITED**

### **Commercial Contract – Telecommunications Infrastructure Project**

---

#### **Highlights**

- Commercial agreement signed with major broadband telecommunications network infrastructure project;
- Aeeris to provide alerting, forecasting and monitoring tools which will track and report on risks nationally, including severe weather events, flooding, bushfires, temperature inversions and power outages;
- Adds to Aeeris' already well-established blue chip client base.

#### **Commercial Agreement**

Aeeris Limited (ASX: **AER** and 'the **Company**') is pleased to announce it has signed a commercial agreement with a nationally significant broadband telecommunications network infrastructure project in Australia.

Aeeris will provide its *Early Warning Network* (EWN) services, which will be used to improve the safety of its employees and reduce the risk to the organisation Australia-wide.

This is another national project for the Company, in addition to the agreement announced recently with a leading ASX listed property group.

#### **Services and benefits**

As part of the agreement Aeeris' *Geospatial Notification Information System* (GNIS) will provide a set of alerting, forecasting and monitoring tools as part of the EWN offering, which will be integrated seamlessly across a number of divisions including the organisation's National Service Operations Centre, Field Operations and Business Continuity and Disaster Response units.

The tools will enable the customer to track risks such as severe weather events, flooding, bushfires, temperature inversions and power outages.

The organisation will benefit from the EWN's unique 24/7, 365 days per year Alert Operator monitoring capability, which is backed by many years of collective meteorological and hazard observation experience.

The customer is building an infrastructure project on a very large scale, and is seeking to use Aeeris services to protect employees and contractors, many of whom are in the field.

As such the services that Aeeris provides will enable the organisation to not only protect its workers, contractors and assets by enhancing internal health & safety and asset management capability, but will also allow the customer to increase the efficiency of its work force and monitor the optimal time to commence work in remote areas.

Kerry Plowright, CEO of Aeeris commented:

*“We’re delighted to have been chosen by the developer and operator of this significant broadband telecommunications network infrastructure project to provide our alerting and monitoring services. With a national project such as this it is important to be able to foresee, prepare for and respond to any potential threat to their business operations or people and we believe they have recognised EWN’s unique ability to enable this.”*

### **About Aeeris**

Aeeris Limited is one of the World’s leading aggregators of geospatial data and provides unique location based Safety, Operations Management, Severe Weather and All Hazards data and content services.

The Company’s *Early Warning Network* platform and proprietary *GNIS* technology system enable Aeeris to provide a range of critical services - Live data on natural and man-made hazards affecting our clients, various applications to protect workers and assets, aerial and ground based imaging of facilities and infrastructure, and digital tracking, mapping and monitoring of assets and personnel.

Additionally, the Company provides corporate and government clients with specific digital alerts and other content in real time regarding a range of disruptive geospatial events including storms, floods, damaging wind, hail, hurricanes and cyclones, as well as non-atmospheric hazards such as fire, tsunami, solar radiation, traffic and power outages.

Our services solve natural disaster awareness problems and promote personal and employee safety, asset protection, risk management, as well as helping to mitigate the financial impact of adverse events.

Aeeris is listed on ASX with the ticker code AER
