

AEERIS LIMITED

EWN Signs First New Zealand Customer

Aeeris and the Early Warning Network (EWN) sign agreement with major client to deliver alerting services into New Zealand

Following the signing of its first agreement in New Zealand, the Early Warning Network is extending its monitoring and alerting service to cover both North and South Islands for all weather and other natural hazards.

The extension of EWN's service to cover New Zealand does not require any additional resourcing. The ease with which EWN can scale both geographically, or by end user, is made possible by the Company's proprietary Geographic Notification and Information System (GNIS).

"We could just as easily deliver our services into South America or Africa. This particular agreement has been in the works for a while and other clients have already said they would like to follow;" said Kerry Plowright, Managing Director, EWN.

With this agreement, the business introduces to New Zealand an entirely unique blend of technology, experience and expertise. The roll out of EWN's standard service also provides the presence to introduce other solutions which are highly relevant to New Zealand, such as the Intelligent Flood Alerting System. This capability delivers an end to end, automated flash flood alerting system utilised by emergency management with warnings automatically issued to the public. Residents within the catchment area opt-in to receive warnings via an App, SMS, email and phone, or through the website.

In addition, the Company has recently added customers from both the insurance industry and local government. EWN services are subscription based, and every customer win adds to its growing annuity revenue stream.

About Aeeris

Aeeris Limited is a leading geospatial data business.

The Company's **Early Warning Network** system and proprietary **GNIS** technology platform ingests and maps vast amounts of live data from multiple sources regarding severe weather, fire, traffic, and other geospatial hazards.

The technology allows us to track and monitor very large numbers of users, and communicate instantly with these users, especially about events which impact their safety.

Our technology enables Aeeris to provide critical services to our enterprise and government customers:

- Live data, content, alerts and notifications on natural and man-made hazards affecting our clients, including severe weather, fire and traffic conditions, with our products **All Alerts™** and **Situation Room™**
- Pioneering innovative systems and apps to digitally track, monitor, map and protect workers and assets on the move with our products **Safe@Work™** and **SecureAMS™**

Our technology solutions provide many benefits to our clients including the ability to:

- Monitor, map and track staff, contractors, assets and operations
- Communicate with multiple staff regarding live safety hazards in real time
- Improve Workplace Health & Safety, and reduce risk and liability
- Manage personnel with regard to security, facility access, time-billing and fraud
- Improve operational efficiencies, labour scheduling and asset management

Our product offerings solve natural disaster awareness problems and promote personal and employee safety, asset protection, risk management, as well as helping to mitigate the financial impact of adverse events, geospatial hazards, personal injury, workplace safety, security breaches, fraud and inconvenience.

Aeeris is listed on the ASX with the ticker code AER
